Notification to All Shareholders

30<sup>th</sup> March 2013

**Business Development**

**PL-231 REIDS DOME : BOWEN BASIN. CENTRAL QUEENSLAND, AUSTRALIA.**

Dome and Wharf Resources Plc are pleased to announce that they have agreed with a UK funding source to exploit the shallow gas within PL-231, Reid's Dome. Dome estimates a substantial amount of electrical power can be generated from the shallow gas encountered during the testing of the Primero-1 exploration well. The new JV partner has agreed to make available all the finance for the installation of gas fuelled generators and all other necessary infrastructure.

Queensland power distribution and utility companies have been contacted in order to enter our JV and share the costs on the installation of power transmission lines in order to tie into the nearest entry point of the existing electrical grid and distribution system. They have replied positively.

Dome and Wharf are at present discussing with JV partners the way forward and we hope they will respond positively. In any case the UK JV is ready to take 100% interest in the project.

A later development plan inclusive of the power station and proposed phased later field development and an updated Environmental Plan and Authority are currently being prepared by Dome for the Department of Natural Resources and Mines in Queensland, Australia. The design of the plant will be provided to the JV partners by Dome at no costs to the JV.

Dome and Wharf are at present discussing with JV partners the way forward.
